

Name: _____

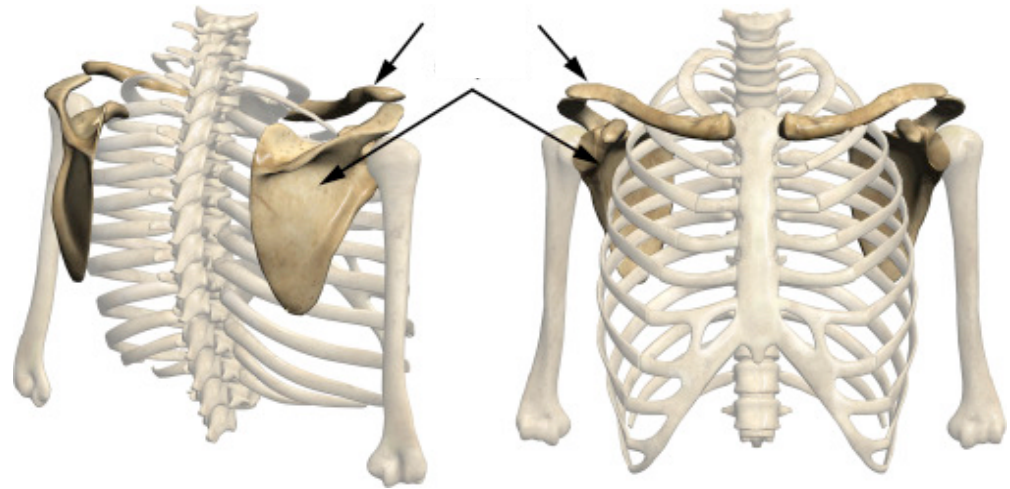

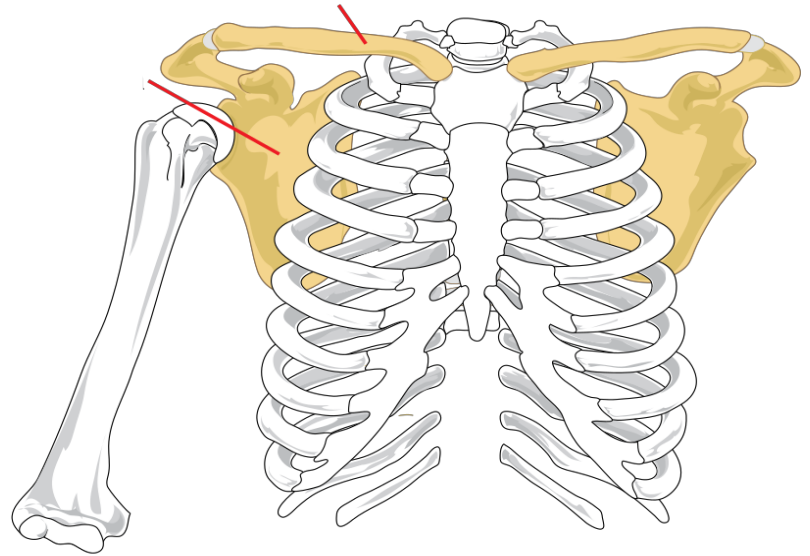

Biol 40A Week 5 Packet: The Appendicular Skeleton

1. What is a girdle?
2. What bones makes up the pectoral girdle?
3. What bones make up the upper limb?
4. What bone make up the pelvic girdle?
5. What bones make up the lower limb?
6. When siding the hummerus and femur, what direction should the head be oriented?
7. When siding the scapula and os coxae, what direction should the glenoid cavity and acetabulum be oriented, repspectively?

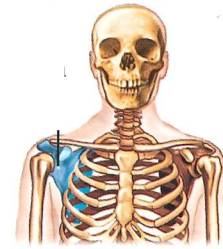

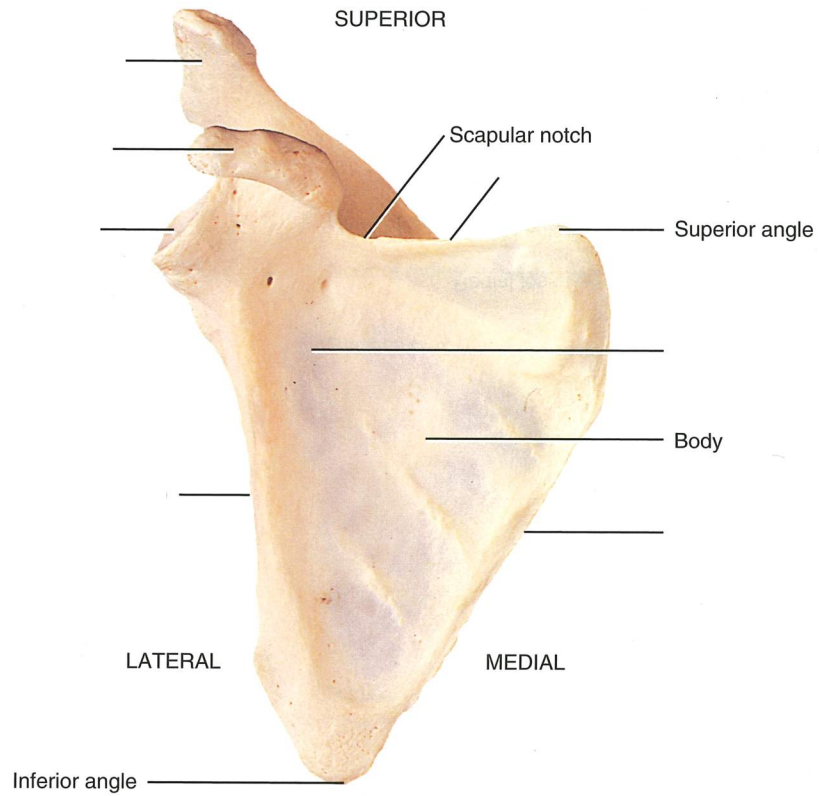

Using your Week 5 Terms List, label the following bones and bone markings of the Appendicular Skeleton. Also, you are responsible for "siding" (is it a right or left?) the following disarticulated bones: scapula, hummerus, coxal bone (os coxae), femur and tibia.
